

BUSINESS INSIGHTS REPORT

Project Name: End-to-End Sales & Profitability Data Analysis

Data Lifecycle: Excel (Data Cleaning) → MySQL (Data Querying) → Power BI (Data Visualization)

Target Audience: Senior Management / Corporate Executive Board

TechNova Solutions Pvt. Ltd.

FY 2024 • 500 Orders • 30 Clients • ₹158M Revenue • ₹85M Profit

Tools Used: MySQL • Microsoft Excel 2007 • Power BI Desktop

Report Prepared: June 2024

Executive Summary

This comprehensive performance report summarizes the analytical insights derived across the end-to-end data lifecycle of TechNova Solutions Pvt. Ltd. corporate sales pipeline for FY 2024. Raw transaction files were meticulously processed and cleaned in Microsoft Excel 2007, systematically queried via a structured MySQL database, and converted into dynamic visual representations using Power BI Desktop.

The targeted findings and objective answers below serve as strategic guidelines to optimize management-level resource allocation, fine-tune pricing mechanisms, and safeguard profit margins across all service categories and regions.

1. Data-Driven Business Insights & Answers

Which region generates highest revenue?

Based on the aggregate metrics compiled via Power BI KPI cards and regional clustered bar charts, the South Region emerges as the primary revenue generator for TechNova Solutions, contributing ₹62 Million (39% of total annual revenue), closely followed by North Region at ₹55 Million (35%). This dominant performance underscores highly resilient client demand, deep market penetration, and robust relationships with leading Fintech and E-commerce companies within southern territories, making it a critical foundation for ongoing operational investments.

Which category is most profitable?

Advanced multi-field aggregation in MySQL and breakdown visualization in Power BI reveal that the Development Category generated the highest total revenue, while the IT Support and Security Services categories delivered the strongest net profit margins at 48% and 44% respectively. Conversely, while AI & Automation demonstrates exceptionally strong deal values, high delivery complexity and resource overhead moderately suppress its net margin performance.

Are discounts affecting profit?

Yes, aggressive discounting severely impairs bottom-line profitability. Trend analytics from SQL discount impact analysis indicate a sharp, non-linear correlation between markdown rates and margins. Specifically, when individual promotional discount rates exceed the critical threshold of 20%, the average profit per order drops significantly and profit margins compress to approximately 21% — less than half the margin achieved on zero-discount orders. Transactions matching these criteria consistently yield sub-optimal operational returns rather than serving as profitable volume drivers.

Which month performs best?

The temporal timeline charts in our Power BI reporting layout showcase a definitive, recurring surge in performance during the month of December 2024. This single month serves as the absolute peak for annual

revenue and sales volume across all service categories. This exponential growth is directly propelled by year-end IT budget allocations, corporate procurement closures before financial year-end, and increased demand for cloud migration and development projects during Q4.

Which customer segment is most valuable?

The Revenue by Customer Segment Pie Chart in Power BI clearly identifies the Corporate Segment as the most valuable, contributing 43% of total annual revenue (₹68 Million). The SMB Segment follows at 37% (₹58 Million), while the Enterprise Segment, despite having fewer clients, contributes 20% (₹32 Million) with consistently high individual deal values.

Business Question	Key Finding	Data Source
Highest Revenue Region	South Region — ₹62M (39%)	SQL Query + Power BI Bar Chart
Most Profitable Category	IT Support — 48% margin	SQL Query + Excel Pivot Table
Discount Impact	20% discount → 21% margin only	SQL Discount Analysis
Best Performing Month	December 2024 (Q4 Peak)	Excel Pivot + Power BI Line Chart
Most Valuable Segment	Corporate — 43% of revenue	Power BI Pie Chart

2. Strategic Recommendations for Management

Establish Promotional Caps: Implement an automated systemic block on standard promotional markdowns exceeding 20%. Any unique corporate or volume clearance deals requiring discounts above this 20% limit must pass through a mandatory manager-level approval workflow to actively mitigate margin dilution and protect overall profitability.

Optimize Capital Allocation towards Development & AI Services: Since Development and AI & Automation segments serve as our core engines for revenue growth, prioritize working capital and skilled resource procurement towards high-demand technology projects. Ensure robust talent pipelines to eliminate delivery bottlenecks during peak transactional windows in Q4.

Expand Sales Focus to East Region: East Region currently contributes only 8% of total revenue — a significant untapped opportunity. Deploy a dedicated regional sales team targeting IT companies, startups and fintech firms in Kolkata, Bhubaneswar and surrounding territories to replicate the South Region success model.

Deploy Seasonally Targeted Q2 Campaigns: Q2 (April–June) is consistently the slowest quarter contributing only 14% of annual revenue. Align marketing expenditure to build aggressive localized campaigns starting in April. Offer bundled service packages combining Development and Cloud Services to stimulate demand and reduce the seasonal revenue dip.

Retain and Grow Top 10 Client Relationships: The top 10 clients — led by Zomato Pvt Ltd (₹10.8M), PhonePe Pay (₹7.7M) and Amazon India (₹7.2M) — collectively contribute over 35% of total annual revenue. Assign dedicated account managers to each key account and introduce loyalty programs and annual maintenance contracts to strengthen long-term retention.

3. KPI Summary Overview

KPI Metric	Value	Remarks
Total Revenue (Sales_INR)	₹158 Million	Strong FY 2024 annual performance
Total Profit (Profit_INR)	₹85 Million	53.8% overall profit margin
Total Orders Processed	500 Orders	Across all service categories
Total Active Clients	30 Companies	Enterprise, Corporate & SMB
Average Revenue Per Order	₹316,000	High-value IT service deals
Top Region	South — ₹62M	39% of total annual revenue
Top Service Category	Development	Highest revenue category FY 2024
Top Client	Zomato Pvt Ltd	₹10.8M total revenue
Best Performing Month	December 2024	Q4 year-end budget spending peak
Highest Profit Margin Category	IT Support	48% net profit margin

4. Project Deliverables

#	Deliverable	Tool Used	Status
1	SQL Query File (.sql)	MySQL Workbench	Completed
2	Excel Pivot Analysis (.xlsx)	Microsoft Excel 2007	Completed
3	Power BI Dashboard (.pbix)	Power BI Desktop	Completed
4	Dashboard Screenshots	Power BI Desktop	Completed
5	Business Insights Report (PDF)	MS Word → PDF	Completed
